

Browser Redirect }

Client Side Web Development

Redirecting users

Sometimes domain
names change, and
companies change

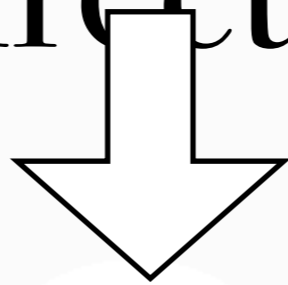

Browser redirects
are a great way to
forward the users

Browser Redirect

```
<script language="javascript">  
function browserRedirect() {  
    window.location="http://www.google.com";  
}  
  
</script>  
</head>  
<body onload="browserRedirect()">  
</body>  
</html>
```

Browser Redirect

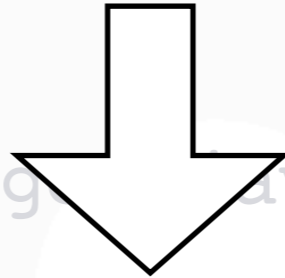

Set up the
javascript

```
<script language="javascript">  
function browserRedirect(){  
    window.location="http://www.google.com";  
}  
  
</script>  
</head>  
<body onload="browserRedirect()">  
</body>  
</html>
```

Browser Redirect

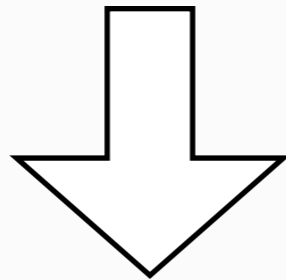

Redirect function

```
<script language="JavaScript">
function browserRedirect(){
    window.location="http://www.google.com";
}
</script>
</head>
<body onload="browserRedirect()">
</body>
</html>
```

Browser Redirect

```
<script language="javascript">  
function browserRedirect()  
    window.location="http:  
}  
</script>  
</head>  
<body onload="browserRedirect()">  
</body>  
</html>
```

call the function
onload
